## Frontend developer

### Cover Letter

Dear Ms. Martine Truong Sletne,

I am writing to express my interest in the Front-end developer position at WebMed AS, as advertised. With a newly finished degree in frontend development, I am now eager to start working with clients, contribute to your team and help the growth of the company.

For the last 10 years I have myself worked within healthcare helping people manage their days more on their own. The last few years it has become apparent that the way forward is by combining healthcare and technology to find new ways of thinking about how we give help to those in need. As we all know by now there will be a shortage of healthcare workers while people live longer. The time for change is now.

WebMed AS has always been at the forefront of technological advancements, and your commitment to developing cutting-edge solutions is what draws me to this position. I am particularly impressed with the way your company changed everything by making sensors that could pick up changes in temperature or blood pressure, heartbeats per minute or even longer sleeping patterns that could again indicate the start of an infection.

I am eager to bring my expertise within healthcare and now my degree in development into the technological world to find even newer ways to combine these fields to improve patient care. I believe that my unique background can contribute to developing innovative solutions that enhance the patient experience and efficiency in healthcare.

Thank you for considering my application. I look forward to the opportunity to discuss how I can support WebMed AS in its continued innovation and success.

**Sincerely,**

Lise Ervik
